DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Choudary et al.

Choudary et al. (US 6,087,289) discloses an oxygen selective adsorbent composition and a process of preparing such a composition. The process comprises: (a) preparing a mixture of a zeolite powder and binder; (b) shaping the zeolite mixture to obtain adsorbent pellets; (c) subjecting the pellets to calcination; and (d) subjecting the pellets prior to or after calcination or both to cationic exchange in the presence of at least a cerium salt solution (column 4, lines 40-53). Suitable zeolites include Zeolite X and an example uses Na-X zeolite as the starting material (column 4, lines 10-20). It is taught that the exchange is carried out with a 1-10 wt% salt solution at a temperature of 30-100 degrees C for 4-48 hours (column 4, lines 50-60). In an example, cerium chloride is used as the cerium salt and the exchanged zeolite is filtered, and washed with hot distilled water (Example 5). The reference details that the composition is first

dried in air at a temperature of 28-32 degrees C for 6-18 hours, followed by calcination at 450-700 degrees C for 2-18 hours (column 5, lines 1-15).

As each and every element of the claimed invention is taught in the prior art as recited above, the claims are anticipated by Choudary et al.
